

You are designing a mobile “**To Do**” web app. Requirements:

- App should be viewable on any standard browser on a mobile device. ([meta media](#))
- User **should** be able to add **Tasks**.
  - A task has “title (required), description (not required), creation date (required), status: new/done (required)” attributes
- User **should** be able to **view** the **Task details**.
- User **should** be able to remove **Tasks**. (User **must** be able to confirm/cancel this action)
- User **should** be able to mark a **Task** as done.
- User **should** be able to update a **Task**.
- User **should** be able to search through their **Tasks**.
- User should be able to filter their **Tasks**. (show all, show done, show current)
- There **must** be a **Header** (56px) on the top that the content scrolls underneath.
- You are **not** allowed to use any external library other than **JQuery**.
- Use CSS transitions wherever applicable.

Everything is in memory, no backend is required.
